DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1, 2, 11, 12, 21, and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by McRoberts et al (US Patent 5, 663,961).

Regarding to claim 1, 11, and 21, McRoberts discloses a method (fig. 9) for transferring data in a network processing device, comprising reading a current entry in a receive memory 56 (col. 54-65); identifying a time slot period for receiving the data according to the current entry in the receive memory 86 (col. 9 lines 1-6); identifying a current receive channel register in the network processing device to write the received data according to the current entry in the receive memory (col. 9 lines 1-6); receiving data for the identified time slot period into the identified current receive channel register

Art Unit: 2616

100 (col. 9 lines 59-65); moving the current entry to a next entry in the receive memory when the time slot period expires 92 (col. 10 lines 32-35); identifying a next time slot period and a next receive channel register according to the next entry in the receive memory 94 (col. 10 lines 35-39); and receiving data into the identified next receive channel register for the identified next time slot period 88 (col. 10 lines 40-62).

Regarding to claims 2, 12, and 22, McRoberts discloses moving to a beginning entry in the receive memory when a last entry is identified in the receive memory and the time slot period expires (col. 10 lines 55-62).

Allowable Subject Matter

3. Claims 3-10, 13-20, and 23-30 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
